Teacher: _____ Date: _____

Optimisation

For questions 1 – 8 solve the optimisation problems.

1. Find two positive numbers whose sum is 300 and whose product is a maximum.	**2.** Find two positive numbers whose product is 750 and for which the sum of one and 10 times the other is a minimum.
3. Let x and y be two positive numbers such that $x+2y=50$ and $(x+1)(y+2)$ is a maximum.	**4.** We are going to fence in a rectangular field. If we look at the field from above the cost of the vertical sides are \$10/ft, the cost of the bottom is \$2/ft and the cost of the top is \$7/ft. If we have \$700 determine the dimensions of the field that will maximize the enclosed area.
5. We have 45 m^2 of material to build a box with a square base and no top. Determine the dimensions of the box that will maximize the enclosed volume.	**6.** We want to build a box whose base length is 6 times the base width and the box will enclose 20 in^3. The cost of the material of the sides is \$3/in^2 and the cost of the top and bottom is \$15/in^2. Determine the dimensions of the box that will minimize the cost.
7. We want to construct a cylindrical can with a bottom but no top that will have a volume of 30 cm^3. Determine the dimensions of the can that will minimize the amount of material needed to construct the can.	**8.** We have a piece of cardboard that is 50 cm by 20 cm and we are going to cut out the corners and fold up the sides to form a box. Determine the height of the box that will give a maximum volume.
